Title	Summary	Regional Price	Top 5 vs Bottom 5 Countries	Top 10 vs Bottom 10 Cities	Amenties and Pricing	Guest Rating
-------	---------	----------------	-----------------------------	----------------------------	----------------------	--------------

This project analyzes Airbnb listings across the 27 EU countries to see how price, amenities, and guest ratings are connected. Data was collected using Python Selenium from Airbnb’s public pages. The study explores which cities and countries have the highest and lowest prices, how premium amenities affect pricing, and how guest ratings like cleanliness, accuracy, and value compare. The findings show that large cities and premium features often raise prices, but higher cost doesn’t always mean better value.
